

BI Developer

Line manager

Senior BI Developer

Purpose

We are experts in managing large volumes of data across diverse business sectors and provide data services and business insight to help businesses meet the requirements of various legislation such as the: Packaging Waste Regulations, Waste Electrical and Electronic Equipment (WEEE) Regulations, Waste Batteries Regulations, Registration, Evaluation, Authorisation and Restriction of Chemical Substances (REACH), the Modern Slavery Act and waste and resource management. We can also help businesses that are looking to improve recycling performance and track waste costs.

Using our compliance knowledge, data expertise and our leading packaging weights database, we have gone one step further to help businesses with the development of the *Data Insight Platform*. The platform enables customers to quickly and intuitively analyse vast volumes of data across their supply chains, providing them with greater business intelligence. Valpak's Insight Platform is the first to allow retailers to analyse their own data, to make design changes, meet targets and fulfil wider Corporate Social Responsibility goals. It offers a unique opportunity to change future packaging design and has been used in a wide range of applications.

The Role

The successful candidate will work for our Senior BI Developer initially supporting the entire Data Visualisation lifecycle from the extraction of data from source system, creation of complex QlikSense data models through to surfacing these models in meaningful intuitive customer-facing data visualisations for our Data Management customers. Ultimately there will be opportunities to drive own project streams as we scale.

The Candidate

Your experience will include:

- Working with large data (>100M records)
- Blue chip customers/employer (retail/banking ideal)
- Data analysis, with an ability to spot interesting patterns and pre-empt customer viewpoints/questions
- Building visually engaging and intuitive data driven user interfaces

Technical:

- An eye for detail at a visual and content level
- Expert level knowledge in T-SQL programming
- Data Warehousing design and maintenance (ETL using SQL and SSIS)
- Kimball data warehousing theories
- Scripting, front-end design using Qlik(View/Sense) or equivalent such as Tableau or PowerBI.
- Experience of nPrinting would be desirable.
