

Navigating Carbon Border Adjustment Mechanisms

What the EU and UK
CBAMs mean for
your business

Executive Summary.

The EU’s Carbon Border Adjustment Mechanisms (CBAM) is a landmark policy aimed at preventing carbon leakage by applying a levy on carbon-intensive imports.

In aligning the carbon costs of imported goods with those of domestically produced goods, CBAM protects the competitiveness of European businesses while encouraging cleaner industrial production across global supply chains.

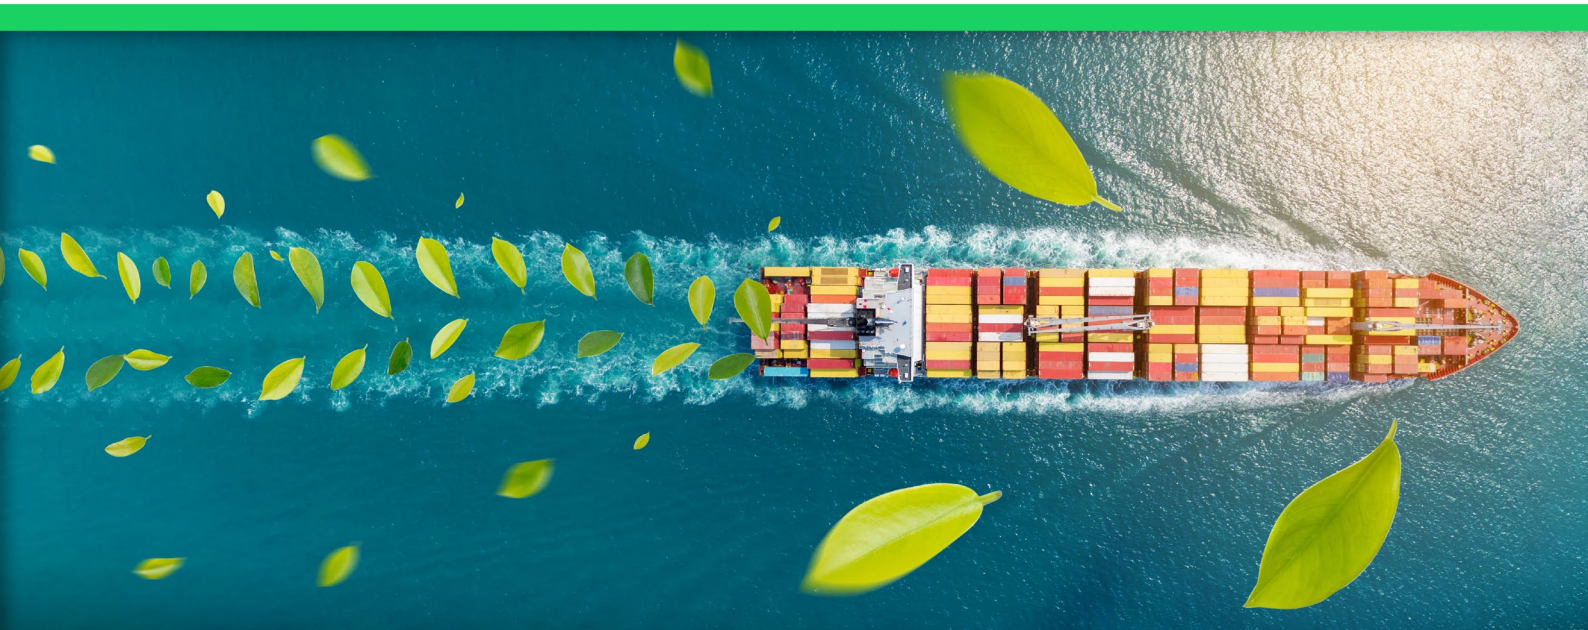

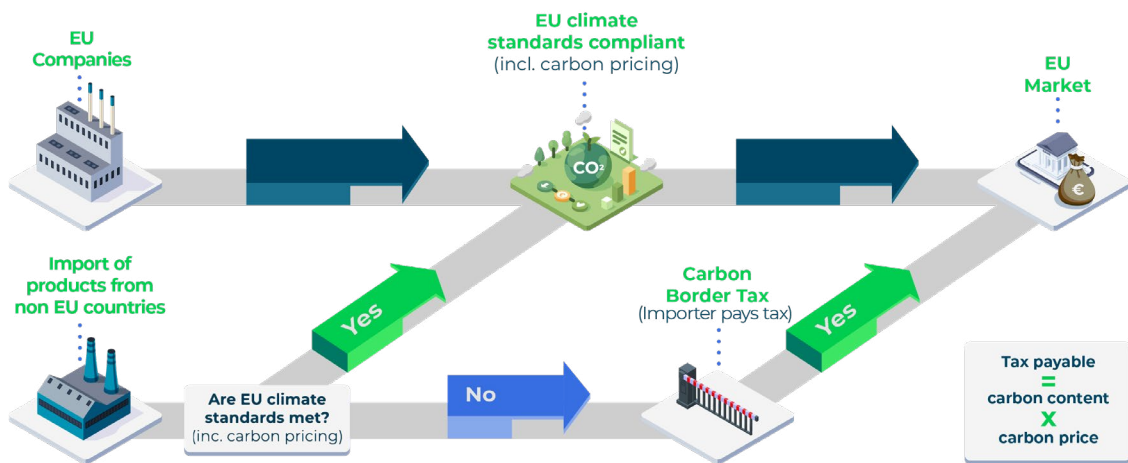

The framework entered its definitive implementation with financial implications on 1 January 2026. The original (EU) 2023/956 CBAM regulation was amended through (EU) 2025/2083, introducing key changes such as a 50 tonne de-minimis threshold and verification requirements.

The UK intends to introduce its own CBAM in 2027; however, some key differences in design may create additional complexity for businesses operating under both regimes. These differences include alterations in scope, reporting thresholds, and financial obligations.

The recently announced UK-EU renewal deal may, however, see a closer alignment of the two systems through efforts to harmonise their Emissions Trading Systems.

CBAM will have the greatest impact on importers of steel, aluminium, cement, fertilisers, hydrogen, and electricity. Some of the key affected industries include the automotive, aerospace, manufacturing, construction, metals, and energy. Businesses operating in these are likely to face either a direct reporting obligation or a responsibility to provide detailed emissions data.

Given the complexity of global supply chains and the high costs of compliance, it is essential for concerned businesses to prepare to avoid any disruptions.

1. Introduction

Background

The implementation of the Kyoto Protocol in 2005 kick started international efforts to curb global greenhouse gas (GHG) emissions and saw 192 countries commit to reducing their GHG emissions in accordance with agreed targets.

That same year, the EU launched its Emissions Trading System (ETS), now the world’s largest carbon market. The System operates on a ‘cap and trade’ principle where businesses must purchase allowances in accordance with the emission caps for each sector. To safeguard industries from international competition, businesses in sectors most at risk of cheaper imports benefit from free ETS allowances. This helps stabilise costs and maintains competitiveness.

Without such protections, the EU would face the risk of ‘carbon leakage’. This happens when manufacturing is outsourced to non-EU countries with weaker carbon regulations, and lower production costs which could undermine local EU businesses and threaten emission reduction efforts.

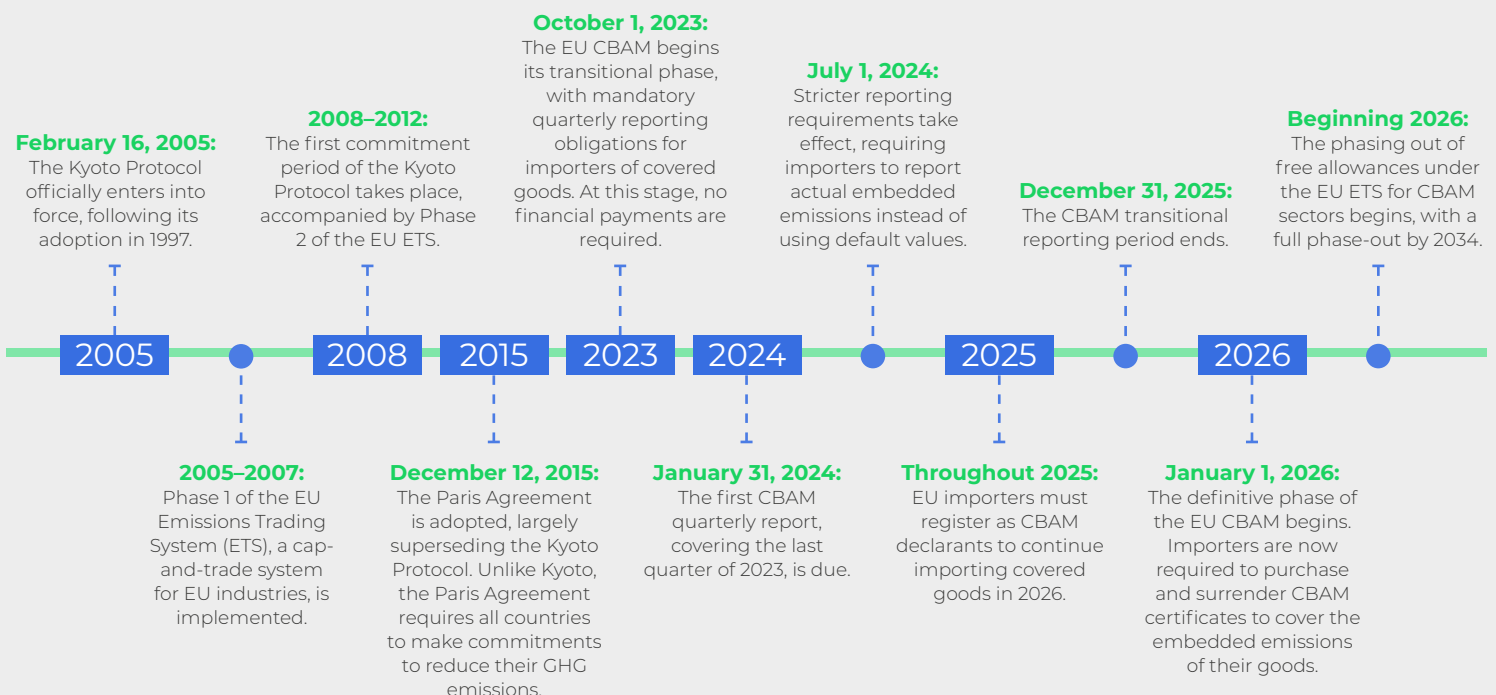

CBAM: A solution

CBAM directly addresses ‘carbon leakage’ by imposing a levy on carbon-intensive imports to match domestic carbon prices. This guarantees that EU industries remain competitive all the while pushing for cleaner production across global supply chains. The CBAM regulations aim to completely phase out free ETS allowances by 2034, leaving behind a level playing field aligned with the EU’s ambitious Net Zero targets.

The UK CBAM builds on a similar rationale but remains a separate framework due to the UK not being a part of the EU. The two frameworks are expected to align further as they mature.

Objectives of this white paper

This white paper seeks to outline the rationale behind CBAM regulations and inform readers of the different ways businesses may be affected.

2. Understanding CBAM

CBAM is a landmark policy that applies a levy on carbon-intensive imports to curb ‘carbon leakage’. It is the first regulation of its kind with far reaching impacts across global supply chains. CBAM will guarantee that EU and UK businesses remain competitive in the face of cheaper imports all the while encouraging cleaner global supply chains.

CBAM’s role in wider climate policy

CBAM was introduced as part of the EU’s Fit for 55 package, which revised ETS allowances in line with the EU’s ambitious Net Zero targets. The package will lead to a gradual rise in ETS allowance prices and the phase out of free ETS allowances by 2034, which CBAM aims to replace.

Amendments to the CBAM regulation through (EU) 2025/2083 have set most small and medium sized businesses outside of the scope of the regulations, while continuing to target 99% of the embedded emissions from carbon-intensive imports.

Free ETS allowances currently protect carbon-intensive EU businesses from cheaper imports manufactured in countries with weaker carbon regulations. CBAM will allow for the phase out of free ETS allowances all the while creating a level playing field aligned with the EU’s Net Zero targets.

While the UK CBAM still requires Parliamentary adoption and a secondary draft, the rationale is very similar to the EU CBAM. The UK regulation also aims to gradually phase out free UK ETS allowances, in line with the UK’s Net Zero goals.

Affected industries

The EU CBAM regulation will affect businesses importing over 50 tonnes of steel/iron, aluminium, cement, fertilisers, and/or over 150€ of hydrogen, and electricity. Key affected industries include:

- **Automotive**
- **Aerospace**
- **Manufacturing and Machinery**
- **Construction and Infrastructure**
- **Metals and Raw Materials**
- **Energy and Power Generation**

The UK CBAM will affect businesses importing over £50,000 of steel/iron, aluminium, cement, fertilisers, and hydrogen. Electricity will be excluded from the UK CBAM. Key affected industries remain the same as for the EU.

Different CBAM actors

Businesses in the affected industries will incur a CBAM responsibility in one of the three following ways:

CBAM Declarant

The importer, or authorised representative, is the only obligated party to submit CBAM reports and purchase/surrender CBAM certificates once the regulation enters its definitive implementation.

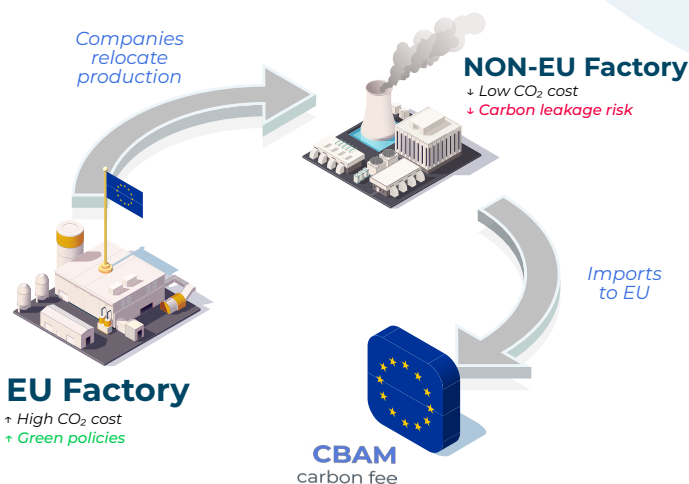

Non-EU/UK Installation

The manufacturer has the responsibility to monitor and disclose manufacturing emissions data with obligated importers.

Supply Chain Intermediary

All third-parties involved in the supply chain have the responsibility to communicate accurate emissions data up and down the supply chain.

Note: EU CBAM Declarants will be able to delegate submissions to EU-based third parties while retaining all legal responsibility.

3. The EU CBAM: Key features

Timeline

Understanding CBAM's timeline is essential to ensure full compliance. Below are the most important milestones:

1 October 2023 to 31 December 2025

This was the regulation's Transitional Period, where only reporting obligations applied. This was a period for suppliers and governments alike to learn about the regulations and implement the reporting requirements. Obligated businesses were only required to submit quarterly reports.

1 January 2026

The start of CBAM's Definitive Implementation, where financial obligations apply. Obligated businesses will have to make financial provisions based on the data submitted in 2026. Certificate issuance for the 2026 period has been deferred until 2027.

31 March 2026

Authorised Declarant Application deadline for obligated businesses. Failure to submit an application by this date will result in the inability to continue importing in 2026.

30 September 2027

First annual reporting deadline by which all certificates must be purchased/surrendered.

Scope of emissions

Obligated businesses are those businesses importing over 50 tonnes of obligated steel, aluminium, cement, fertilisers, and/or over 150€ of obligated hydrogen, and electricity.

CBAM requires obligated businesses to report on their obligated imports' embedded emissions. This includes direct and indirect emissions tied to production, as well as direct and indirect emissions tied to precursor materials.

Direct emissions are the emissions emitted during the manufacturing process, such as GHG emissions.

Indirect emissions are the emissions emitted during the production of energy used in the manufacturing process, such as in the production of electricity.

Precursor materials are any carbon-intensive materials that have been used in the manufacturing of the obligated goods.

Direct Emissions

Released on-site from industrial processes or fuel combustion.

Indirect Emissions

From purchased energy (like electricity or steam) generated off-site but used in production.

Precursor Emissions

Gases released that form pollutants later through chemical reactions in the atmosphere.

Determining emissions

The EU CBAM emissions should be obtained in the following ways:

Using actual data: Monitoring at the source: requires manufacturers to implement monitoring equipment to measure emissions at the source.

Calculation: Determining embedded emissions using monitored values and site-based or publicly accessible standardised emission factors. Benchmarks from the December 2025 updates should also factor in these calculations.

Verification: Actual data will have to be verified by an accredited third-party verifier to be admissible for CBAM submissions. Verification will include in person-audits and maintaining detailed methodological records.

Using default values: Default carbon factors: should emissions data be completely unavailable, the EU has published a list of comprehensive default factors for businesses to use. Country-specific default factors and process-specific benchmarks from the December 2025 update should factor in these calculations. Default values are punitive and should only be used as a last resort.

Certificates and pricing mechanism

CBAM certificate prices will reflect the average EU ETS price from the previous year of submission. Certificates will have to be purchased or surrendered by 30 September of the following year. Obligated businesses will need to hold enough CBAM certificates to account for 50% of their reported emissions at the end of each quarter. Certificates for the 2026 period have been deferred until 2027.

Enforcement and penalties

CBAM reporting is mandatory and non-compliance may result in fines or penalties starting 1 January 2026.

Penalties can reach up to 50 euros per tonne of CO₂, and will vary based on the infraction.

4. The UK CBAM: Key features of an emerging framework

The UK intends to introduce its own CBAM in January 2027. The primary draft has been submitted for Parliamentary review after concluding technical consultation. The secondary draft is expected in the first half of 2026.

Comparing UK and EU CBAMs

The UK CBAM is also aimed at curbing 'carbon leakage'; however, with some key differences in design which may lead to complications for parties obligated under both schemes. As the legislation currently stands, the differences are:

No transitional period: financial obligations will start in 2027, leaving UK-importers with little time to prepare for the scheme.

A different obligation threshold: UK companies with an import value over £50,000 in the twelve months preceding 1 January 2027, or with an expected import value exceeding £50,000 over the next thirty days, at any point from 1 January 2027, will be obligated.

Different obligated commodity codes: electricity will be excluded from the UK CBAM.

Different carbon prices: UK ETS pricing tends to be slightly lower than the EU ETS.

Obligated businesses should start preparing as early as possible given the short timeframe until implementation.

5. Implications for businesses

Compliance

EU and UK CBAM compliance can be broken down into six phases:

Obligation Identification:

Obligated goods should be identified using the obligated EU/UK commodity code lists available in the appendix.

- **EU:** All imports with a flagged commodity code and an import weight over the 50 tonne threshold will require a CBAM submission.
- **UK:** All imports with a flagged commodity code and an import value over the £50,000 tonne threshold will require a CBAM submission.

Registration:

Obligated businesses are required to register with local authorities to gain access to the relevant CBAM portals.

- **EU:** Mandatory registration as an Authorised Declarant by 31 March 2026 is required to continue importing in 2026.
- **UK:** A similar process is expected but not yet required.

Registration is a lengthy process and often requires several administrative steps, making it essential to start as early as possible.

Data collection:

Obligated businesses are required to collect manufacturing emissions data from non-EU/UK producers, including direct, indirect, and precursor material emissions.

Note that UK CBAM will not require indirect emissions until 2029.

Data verification:

All actual data will require accredited third-party verification to be admissible for CBAM submissions. The verification process will involve in-person audits, and clear methodological record keeping.

Cost Forecasting:

Obligation cost forecasting based on supplier emissions data will be essential to understand the impact of CBAM and make the required financial provisions. CBAM certificate costs will be based on the previous year's ETS auction prices..

Report submission:

Verified emissions data will need to be collated and submitted annually using the corresponding CBAM portal. Implementing soft-quarterly deadlines is recommended to avoid errors and minimise costs..

Supply chain risks and opportunities

CBAM reporting requirements can pose a significant challenge on obligated parties that may struggle to collect the required emissions data. Global supply chains often stretch across multiple jurisdictions, some of which lack carbon monitoring frameworks altogether. Many manufacturers:

- Don't have any visibility on their emissions
- Don't see the value in collecting this data
- Don't have the capacity to meet the strict verification requirements

This misalignment between EU regulatory expectations and supplier capacities is emerging as one of CBAM's biggest implementation hurdles.

6. Strategic recommendations

Monitor regulatory developments

Understanding how CBAM regulations evolve ahead of the submission deadlines next year is essential to avoid high obligations, or worse, penalties.

The EU Commission’s proposal to widen the scope of CBAM to include downstream goods in 2028 is a good example of the key changes obligated businesses must keep track of.

The adoption of the UK CBAM and incoming secondary draft is another example of this.

Obligation forecast

CBAM will bring a significant cost to obligated businesses who must evaluate how the regulations will impact their bottom-line.

Understanding how much CBAM will cost is a key step in the right direction. Businesses who don’t adapt will see rising prices due to several aspects of the frameworks, such as rising certificate prices (up from ~75€ in 2025 to ~80€ in 2026), default value mark-ups (up from 10% in 2026 to 30% in 2028), and declining benchmarks (up from 2.5% in 2026 to 5% in 2027). Planning ahead is critical when it comes to CBAM.

Review and adjust supply chains

The short-term burden of CBAM compliance can be eased by working together. Businesses are encouraged to:

- **Open lines of communication with suppliers early**
- **Share the costs and resources required for emissions tracking**
- **Set clear expectations around data standards**
- **Offer guidance or tools where possible**
- **Establish internal reporting systems for compliance**

Building a mutually beneficial compliance strategy can reduce costs, preserve relationships, and enhance long-term supply chain resilience.

7. Case Study: Ellsworth Adhesives

Ellsworth Adhesives received a compliance letter from the Swedish Tax Authority requesting immediate action to meet CBAM reporting deadlines and address regulatory requirements. The letter related to their Fisnar dispensing consumable product, which was imported from China and accordingly subject to the EU's CBAM regulations, an obligation Ellsworth were initially unaware of.

Valpak's CBAM Compliance Team led a detailed analysis to assess Ellsworth's CBAM obligations. The assessment covered:

- Commodity codes and import quantities
- Material composition (steel) and weight
- Manufacturing location (imported from China to Sweden)
- Through close collaboration, Valpak's CBAM Compliance team supported Ellsworth via:
 - **Obligation analysis:** Identifying scope and compliance requirements
 - **Regulatory navigation:** Engaging with Swedish customs and environmental authorities
 - **Emission calculation:** Determining emission factors and overall emissions
 - **Compliance reporting:** Submitting reports through the EU CBAM portal

Valpak's engagement initially involved daily communication and progressively transitioned to milestone-based check-ins to ensure progress.

Key achievements:

- Achieved full CBAM compliance in Sweden, avoiding penalties
- Amplified Ellsworth's reputation as a sustainability-focused, compliant business
- Established a compliance framework for future regulatory requirements

Business benefits:

- **Competitive advantage:** Early CBAM compliance distinguishes Ellsworth in global supply chain sustainability
- **Supply chain insights:** Better emissions data visibility for future optimisation
- **Penalty avoidance:** Timely action prevented non-compliance repercussions

Quantifiable results

While direct emissions reductions were not achieved in this phase, CBAM compliance helped Ellsworth to:

- Monitor and manage supply chain emissions
- Strategise sustainability improvements in the medium to long-term
- Decrease potential tax liabilities associated with emissions.

8. Conclusion

Key takeaways

The EU's CBAM regulation is the first of its kind with far-reaching impacts across global supply chains. Its definitive implementation from 1 January 2026 will mark the start of a gradual phase out of free ETS allowances to better align the ETS system with the EU's ambitious Net Zero targets.

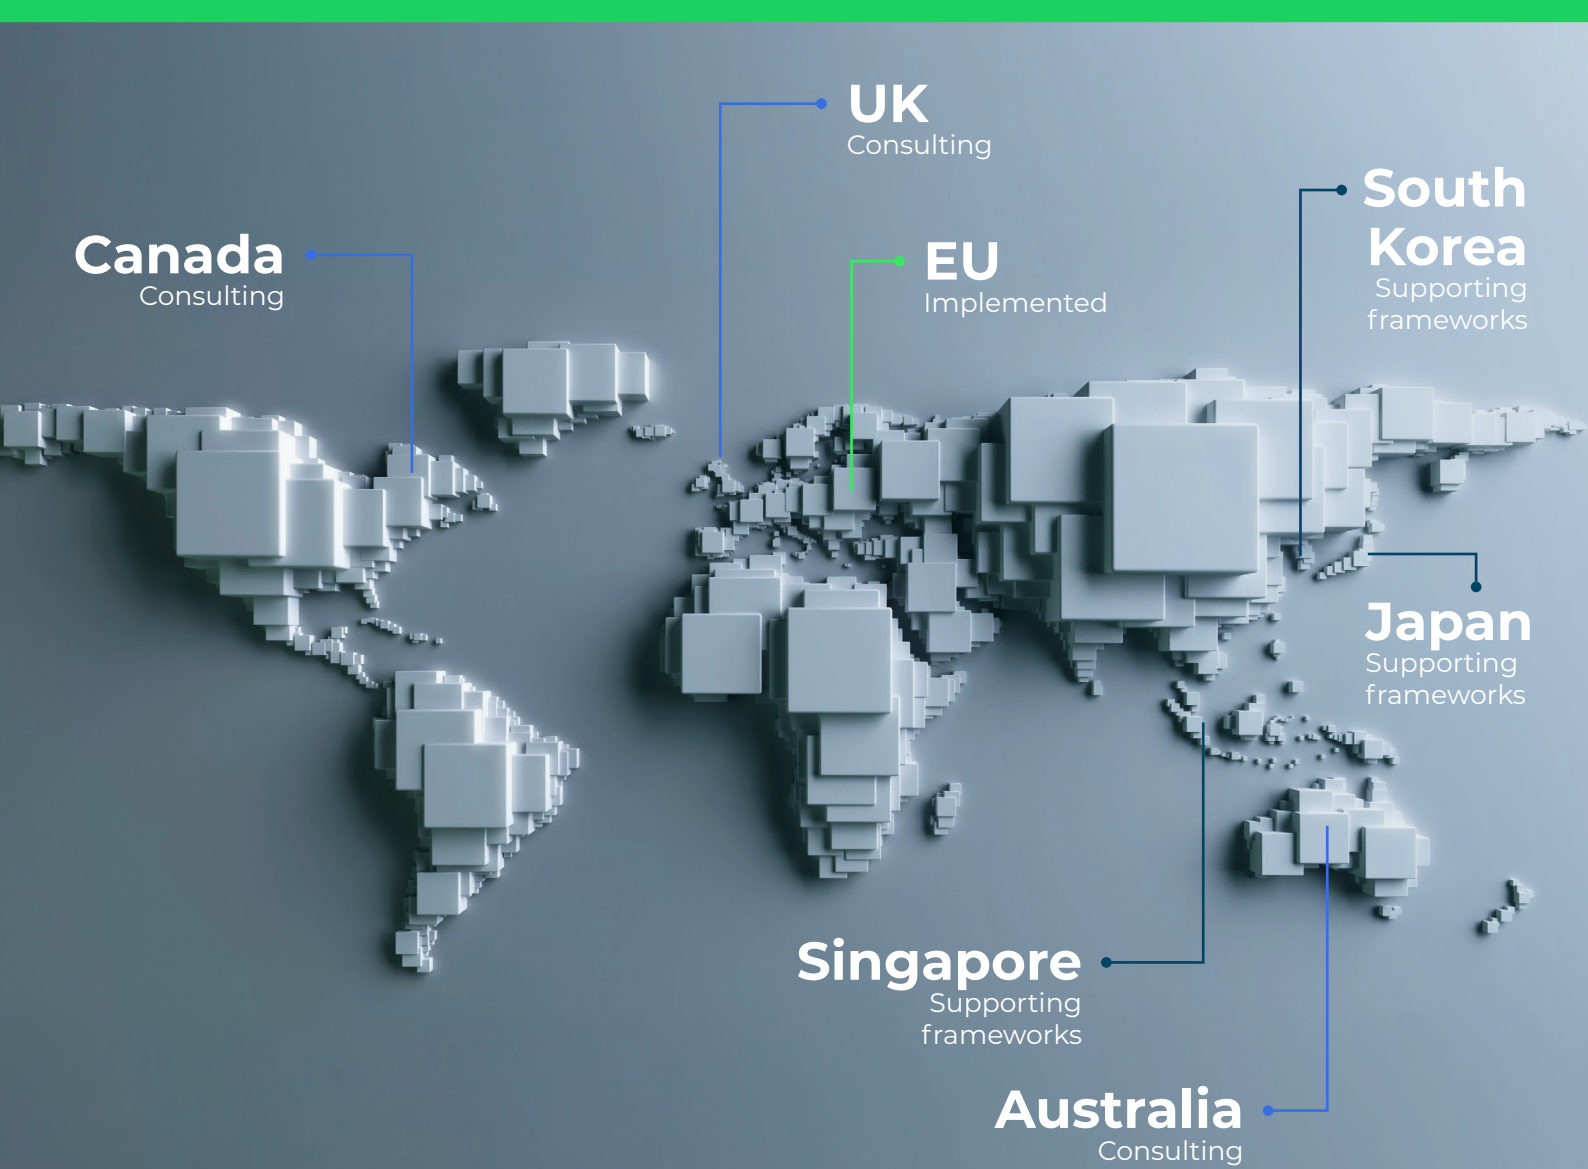

CBAM will affect businesses dealing with steel, aluminium, cement, fertilisers, electricity, and hydrogen imports.

The complexity of modern supply chains can make collecting accurate emissions data a challenge, which is why it is essential for businesses to prepare early and implement a proactive strategy to minimise CBAM-related costs.

CBAM as a step toward sustainable global trade

While the EU's CBAM is the first of its kind, it is far from being the only one. Along with the UK, Australia and Canada are also conducting consultations with plans to implement their own versions of the scheme. Other countries like Japan, Singapore, and South Korea have voiced support for the regulations with intentions to strengthen local carbon pricing frameworks. Being CBAM ready will be beneficial in short and long-term as the world moves towards greener supply chains.

Global momentum behind CBAM
